Summary of Skills:

Comp TIA Security+ Certificate	Java	Linux/Unix	Cryptography
Comp TIA A+ Certificate	C++	Git/Github	MatLAB
Microsoft Office	Jira	Python	RTOS
Time Management	JavaScript	SDLC	HTML/CSS
	MBSE	React	UML/SysML

Education

Bachelor of Science: Computer Science, Western Governors University

Graduation Date: 05/2025

Work History:

Network Support Associate, Dover Fueling Solutions

(10/2023 – Current)

- Delivered advanced technical support for wireless communication products
- Managed incoming calls through the 3CX call system, utilizing TeamViewer or Zoho Assist to remotely access fuel technicians' laptops for troubleshooting wireless devices. Additionally, leveraged AWS cloud-connected services and RouterOS tools to remotely configure and diagnose device issues, documenting and tracking each case in Zoho for efficient issue resolution
- Partnered with SaaS teams to configure and optimize network firewall rules, ensuring secure and reliable connectivity across nationwide gas station infrastructures.

IT Specialist, Cumberland University

(09/2022 – 12/2022)

- Assisted with network infrastructure setup including routers, switches & wireless access points
- Supported configuration needs including Configured IP addresses, VLANs, DNS, DHCP, and other essential network settings to ensure smooth connectivity for end users.
- Utilized WHAT SYSTEM to monitor security systems for potential threats - responding to alerts/incidents, in an effort to prevent breaches and maintain data integrity.
- Provided technical support to end-users, ensuring reliable and secure IT operations

Academic Projects

- **Java Backend:** Developed a high-performance, multithreaded backend for an e-commerce platform using the Spring framework, integrating with a MySQL database to manage product data and order processing. Designed and implemented RESTful APIs to enable seamless communication with an Angular frontend.
- **Machine Learning Application:** Designed and implemented a machine learning model in Python using a multilinear regression model to accurately predict housing prices based on historical and demographic data.

Personal Projects

- **Full Stack Web App:** Designing a full-stack web application with Next.js, MongoDB, and React for goal and schedule management, including user authentication and goal tracking features.
- **Cloud Infrastructure:** Designed and managed on-premise cloud infrastructure with RAID backup, hosting family services such as VPN, cloud storage, and personal websites using a hypervisor.
